

# How a hire moves through PeopleQuest

End to end — from creating the company to a defensible hire decision. Colour tells you who does the work: notice how much of the middle is automatic.

# Set up the role

PHASE 1 · ONE-TIME

Done once per role. This is where you teach the AI what "good" looks like — everything downstream is scored against it.

## 01 Create the company HR

Add the business you're hiring for — name and industry. One client can hold several companies (useful for agencies or multi-outlet groups).

`/companies` → + New company

## 02 Create the job vacancy HR

Job title, industry, location, minimum education, minimum experience, role level, and how many things you want to score in the interview (3 / 5 / 6). **The AI then drafts the scoring criteria and their weights** for that role.

`/jobs/new`

## 03 Define the Success Profile HR AI DRAFTS

The most important step. Set **must-haves**, **nice-to-haves**, **dealbreakers**, your experience benchmark, your **salary budget**, and the ideal personality profile. The AI pre-fills it from the role — you review and approve. This is the yardstick every candidate is measured against.

`/jobs/:id/success-profile`

## 04 Open your interview slots HR OPTIONAL

Add the times you're free to interview. Later, shortlisted candidates book themselves in — no phone tag. Skip this and you can still invite people to a fixed time manually.

Job dashboard → Interview slots

## Publish & attract applicants PHASE 2

Each role gets its own permanent application link. Where you put that link is up to you.

### 05 **Copy the application link** HR

Every vacancy has a unique public link, e.g. `/apply/pq-moonbucks-barista`. It needs no login and works on any phone.

Job dashboard →  Copy link

### 06 **Post it wherever you advertise** HR

Paste the link into your **JobStreet** listing, Facebook or Instagram ad, a WhatsApp broadcast, or your own careers page. The same link serves every channel, so all applicants land in one pipeline.

### **About JobStreet — be realistic**

There's **no direct JobStreet integration today** — you paste your apply link into the job ad and let candidates click through. If JobStreet instead delivers CVs into your email (as it often does), that's fine: use **Path B** below and upload those CVs directly. Both routes end in the same scored pipeline. A proper JobStreet/LinkedIn import is on the roadmap.

## The candidate applies PHASE 3 · ~5 MINUTES

Entirely self-serve on the candidate's phone. Your team does nothing here.

### 07 Opens the link & consents CANDIDATE

They see the role, what the job involves, and a clear **PDPA consent** checkbox before anything is collected.

### 08 Submits details + uploads CV CANDIDATE

Name, contact, expected salary, and their CV as **PDF or Word** (up to 5 MB).

### 09 Completes the personality questionnaire CANDIDATE

Ten short statements, about five minutes — the **OCEAN** assessment. No right answers; it measures traits like conscientiousness and customer warmth against your ideal profile.

### Path B — CVs that arrive some other way

If a CV reaches you by email, from a JobStreet inbox, or on paper, you're not stuck. Upload it yourself at **Upload CV** and the AI parses and scores it exactly the same way, filing it into the right role.

The only difference: they haven't done the personality test yet — so hit **Send OCEAN link** and they'll get their own questionnaire link by WhatsApp. After that, both paths are identical.

# The AI scores them

PHASE 4 · AUTOMATIC, SECONDS

No one clicks anything. This is the part that replaces hours of CV reading.

10 **Reads & structures the CV** AUTOMATIC

Pulls out work history, years of experience, education, skills, languages and expected salary — turning an unstructured document into comparable data.

11 **Scores against your Success Profile** AUTOMATIC

Checks every must-have, nice-to-have and **dealbreaker**, plus your experience benchmark — producing the **Profile fit** score.

12 **Scores personality & checks the money** AUTOMATIC

Compares their OCEAN results to your ideal traits, then checks their expected pay against **your budget and the live Malaysian market rate** — flagging "within budget", "below range" or "above market".

13 **Sorts them into your pipeline** AUTOMATIC

Each candidate gets a **lane** —  strong fit,  review,  likely no — and lands at the right pipeline stage. They appear immediately in your dashboard queue, ranked by score.

## You shortlist PHASE 5

You're now reviewing a ranked shortlist instead of a pile of PDFs.

### 14 Review the ranked list HR

Open the role and see everyone sorted by score, filterable by lane. Open any candidate to see exactly how their score was built.

`/jobs/:id/dashboard`

### 15 Let the AI pick — or compare two HR AI RANKS

**Best Match** ranks the whole shortlist against your profile, budget and market, and explains its choice in writing. Or put two people **side by side** to see criterion-by-criterion where they differ.

### 16 Advance or reject HR

Move people forward or out, one at a time or in bulk. Rejected candidates can be notified automatically.

## Interview PHASE 6

Where most hiring becomes inconsistent — so this is the part the product standardises.

### 17 Send the invite HR

Either propose a fixed time, or send a **booking link** and let them choose from your open slots. They get it on WhatsApp; the booking confirms itself back to you.

### 18 Candidate books their slot CANDIDATE

They pick a time that suits them. No phone tag, no back-and-forth email.

### 19 Run the interview & score it HR AI WRITES QS

The AI writes questions targeting **that candidate's specific gaps**, each with a scoring rubric so every interviewer marks the same way. You rate each criterion 0–100 as you go. (Prefer your own questions? Use the manual sheet instead.)

`/jobs/:id/candidate/:id/interview`

# Decide — with evidence

PHASE 7

The interview score completes the picture and unlocks the final number.

PROFILE FIT

35%

From the CV

PERSONALITY

15%

From OCEAN

INTERVIEW

50%

Your ratings

HIRE BAR

≥ 72

Final score /100

- 20

Final score & recommendation

AUTOMATIC

The three layers combine into one number out of 100, and the AI returns **HIRE / HOLD / REJECT** with a confidence level, the key reasons, the top concern, and a suggested next action.
- 21

You make the call

HR

The AI advises — **you decide**. Record the outcome, and export the full scored profile as a PDF so there's a defensible record of why this person was chosen.
- 22

Nothing goes cold

AUTOMATIC

Anyone sitting too long is flagged as **going stale** on your home queue, so strong candidates don't quietly drift to a competitor while you're busy.
