

PeopleQuest Talent AI

An AI hiring assistant that reads every CV, scores every candidate on what actually matters for your role, and tells you who to hire — with the reasons to back it up. Built for Malaysian businesses.

WHAT YOU GET

- ✓ **Automatic CV scoring**
Drop in a PDF or Word CV — it's read, scored and filed to the right role in seconds.
 - ✓ **Define your ideal hire**
Set must-haves, dealbreakers, experience and budget once — the AI scores against it.
 - ✓ **Guided interviews**
AI writes tailored questions and a shared scoring sheet so everyone marks the same way.
 - ✓ **A queue, not a report**
Your dashboard shows exactly who needs you today — and who's about to go cold.
 - ✓ **A score you can defend**
Every candidate gets one clear number, built from three visible layers — no black box.
 - ✓ **Personality built in**
A short, science-based questionnaire tells you fit before you hire, not after.
 - ✓ **Know what to pay**
Malaysian salary benchmarks so your offer is competitive before you send it.
 - ✓ **Candidates self-serve**
Apply, take the assessment and book their own interview — no phone tag.
-

HOW A HIRE FLOWS

Q What is it, in one sentence?

It's an AI-powered hiring workspace: it screens and scores your applicants, runs a personality assessment, guides your interviews, and recommends who to hire — all in one place.

Q How does it actually score a candidate?

Every score is built from three layers you can see: their **CV / profile fit**, a **personality assessment**, and the **interview** — weighted **35% · 15% · 50%** by default. Add them up and you get one number, out of 100, with a clear "hire bar".

Q AI hiring sounds like a black box — how do I trust it?

That's exactly what it's built to avoid. You can open any score and see every part of it — which requirements were met, how the personality lined up, how the interview went. When someone asks "why this hire?", you have a written, evidence-backed answer instead of a gut feeling.

Q How much time will it save me?

The heavy part of hiring is reading CVs — roughly three minutes each. The AI does that in seconds and scores them for you, so instead of reading two hundred CVs you review a ranked shortlist. You spend your time on the people worth meeting.

Q How does it know what a "good" candidate looks like for my role?

You tell it once, in a **Success Profile**: must-haves, nice-to-haves, dealbreakers, ideal experience, salary budget, even the personality traits of your best staff. The AI can draft this for you from the role — you just review and approve it.

Q What's the personality assessment?

A short questionnaire (about five minutes) based on the well-established "OCEAN" model — five traits like conscientiousness and agreeableness. It tells you whether someone fits the temperament the role needs **before** you hire, not three months in.

Q How does it help me actually decide?

For each candidate it gives a clear **Hire / Hold / Reject** recommendation with a confidence level and the reasons behind it. You can also put two people side by side, or let the AI rank your whole shortlist against your profile, your budget and the live market.

Q How do interviews work?

The AI writes interview questions aimed at that candidate's specific gaps, with a scoring rubric so every interviewer marks consistently. You rate each answer, and that score flows straight into the final number — no separate spreadsheet.

Q How do I know what salary to offer?

There's a built-in **Salary Center** with benchmarks for hundreds of Malaysian roles, cross-checked against official government statistics and live job listings. You can see whether a candidate's expected pay is within your budget and at market — before you make the offer.

Q What's it like for the candidate?

Simple and modern. They apply through a clean link, upload their CV, take the questionnaire on their phone, and book their own interview slot — all self-serve. It reflects well on your brand and saves your team the back-and-forth.

Q Is our data safe and compliant?

Yes. Candidates give explicit consent under Malaysia's **PDPA** when they apply, and everything — CVs, notes, scores — lives in one workspace rather than scattered across inboxes and spreadsheets, so you keep a clear record.

Q Does it only work for F&B roles?

No — it works for any role. The demo uses hospitality and office roles, but the Success Profile and scoring adapt to whatever you're hiring for, from a barista to an accountant to an HR executive.

Q Can I just ask it questions?

Yes. There's an **AI Assistant** that reads your live pipeline and answers in plain language — "who should I hire across all roles?", "who's over budget?". It advises and drafts messages, but it never sends or changes anything without you.

How do we get started?

We'll set up your company and first role, load a few CVs, and walk you through a real shortlist — so you see it working on your own hiring, not a demo. Setup takes a single short session.
