

Quick Start Guide

An AI-assisted hiring tool for Malaysian F&B, retail and hospitality teams.

What it does

PeopleQuest helps you screen and rank job applicants fairly and quickly. It has **two sides**:

- **The Candidate Portal** — a link you share with applicants. They upload their CV and complete a short personality questionnaire themselves.
- **The HR Console** — your private dashboard, where you review applicants, score interviews, and get an AI hiring recommendation.

Every candidate is scored out of 100% across three parts:

Part	Weight*	Who completes it
CV Assessment	35–45%	AI reads the CV automatically
Personality (OCEAN)	10–15%	The candidate answers a short questionnaire
Interview	45–50%	You score it after meeting the candidate

* Weights depend on whether the role is entry-level or supervisory. You can adjust which stages apply per role.

The hiring flow

- 1 You open a role and **copy its application link**
- 2 You send the link to candidates (e.g. via WhatsApp)
- 3 The candidate uploads their CV & completes the questionnaire
- 4 The candidate appears on your dashboard, partly scored
- 5 You interview them and enter your scores
- 6 You generate a final AI recommendation: **Hire / Hold / Reject**

For candidates (the portal)

When an applicant opens your link, they go through five simple steps — no login required:

1. **Role overview** + agree to data-use consent (PDPA)
2. **Their details** — name, email, phone + upload CV (PDF or DOCX)
3. **Personality questionnaire** — 10 quick statements, ~2 minutes
4. **Review** their answers
5. **Confirmation** — done!

For you (the HR Console)

1. Roles screen

See your available roles. For each one you can **Copy application link** to share with candidates, or **View dashboard** to see applicants. You can also **Create a new role** — describe the job and the AI generates a tailored scoring framework for you to review.

2. Dashboard

A ranked list of all applicants for a role. Each card shows their score, current stage (e.g. **Awaiting Interview**), and top strength. You can filter by match quality, **compare** two candidates side by side, **delete** unwanted applications, and open **Pipeline setup** to turn stages on or off — the scoring rebalances automatically.

3. Candidate profile

Click any candidate to see their score broken down by CV, OCEAN and Interview, a progress bar showing where they are, strengths and weaknesses, their work history and skill match, plus a space for your private **HR notes**.

4. Interview scoring

When you're ready to interview, click **Conduct interview scoring** and choose either:

- **AI-generated questions** — the system writes tailored questions and a scoring guide for each area, or
- **Write your own questions** — type your own and score against them.

You give each area a score out of 100. Your questions and notes are saved as a record you can revisit later.

5. Final analysis

Once CV, OCEAN and Interview are all complete, click **Generate final analysis**. The AI reviews everything — including your notes — and gives a clear **Hire / Hold / Reject** recommendation with reasoning.

Good to know

- **Scores shown as “In progress / so far”** are not final — they only reflect completed stages. A full verdict appears once the interview is scored.
- **Fairness:** the AI is instructed to ignore gender, race, religion, nationality and marital status when reading CVs and writing insights.
- **This is a prototype.** Uploaded candidate data may reset periodically as we keep developing. A permanent version with secure storage is available on request.
- The first action of the day may take 30–60 seconds while the system wakes up — this is normal for the prototype hosting.

Try it in 2 minutes

- 1 Open the HR Console (link provided separately).
- 2 Pick a role → **Copy application link**.
- 3 Open that link in a new tab (or your phone) and submit a sample CV.
- 4 Go back to the dashboard → the candidate appears, scored.
- 5 Open their profile → **Conduct interview scoring** → submit scores.
- 6 **Generate final analysis** to see the recommendation.
